

Energy Policy

With the aim of enhancing the energy efficiency of our operations, the Company is committed to:

- Establishing, documenting, implementing, and maintaining an Energy Management System in accordance with the requirements of ISO 50001, with the objective of continually increasing energy efficiency and minimizing energy use. Make climate change considerations an integral part of REM Integrated Management System
- A set of objectives and time-specific, measurable - whenever practicable and possible - and attainable targets will be established and maintained, which shall relate to a combination of design optimization, in-service performance monitoring and best-practice operational management processes.
- Establishing and maintaining Ship Energy Efficiency Management Plans (SEEMP) which shall be regularly reviewed by the management. Those Plans, which apply to all fleet vessels, provide standard procedures and practice on best energy management under the various operational modes of each vessel.
- Ensuring the availability of information and of necessary resources to achieve the set objectives and targets.
- Promoting energy efficiency awareness through training to the shore and sea-going personnel and implementing energy related campaigns and other relevant personnel incentive/motivating programs.
- Promoting co-operation within the relevant interested parties with the aim of facilitating energy efficient operations.
- Monitoring and complying with all applicable legal and other requirements related to ship energy management.
- Supporting the purchase of energy-efficient products and services, and design for energy performance improvement.

Lars Conradi Andersen
Chief Executive Officer
